Ford Mustang Factory Hood Scoop  
Rally Graphic Installation Tips

Hood  
Graphics

Hood Scoop  
trim line

It's come to our attention that a condition exists in reference to the '05-Current Ford Mustang Factory Hood Scoop whereby certain movement occurs between the Scoop and the Hood as the vehicle is driven.

Thus, if vinyl graphics are installed under the Scoop, the vinyl may release around the edges - especially in the two front corners.

To cure this issue, we recommend that the area under the Scoop be trimmed and removed so as to allow movement to occur between the Scoop and the painted surface of the Hood.

Suggested Steps for Graphic Installation:

- 1) Carefully remove Hood Scoop and set to the side.
- 2) Prep area for installation of Hood Graphics.
- 3) Install Hood Graphics.
- 4) Temporarily re-install Hood Scoop over new Hood Graphics.
- 5) Trace the outside of the Hood Scoop on the new Hood Graphics with a pencil. A 1/16" (1.5875mm) space is suggested between the Hood Scoop and the Hood Graphic to allow for movement.
- 6) Remove Hood Scoop and carefully trim along the pencil line.
- 7) Once trimmed, remove graphics under the Hood Scoop.
- 8) Re-install Hood Scoop.

While these instructions refer to a new graphic installation, if you are experiencing the condition noted above on previously installed graphics, simply follow steps 5 thru 8.
